WEB DEVELOPER

projects

GEOplanner
MongoDB/ Express/ Angular/ Node/ Google Maps API

This project was designed as a tool for businesses that require scheduling for onsite appointments. A custom map zoning system is used to qualify appointments for a calendar; multiple zones can be created.

tic-tac-toe
Express/javascript/Jasmine

Using object oriented programming and unit testing, this project allows a user to challenge the computer in a game. The computer uses Newell and Simon's strategy to never lose and win whenever possible.

Upnote
Rails/Ruby

This project allows the user to keep notes online. A user can create categories of notes and add notes, as well update and delete.

Rocket
MongoDB/Express/Javascript

This project was one of my very first. It is a game using velocities, angles, and gravity to formulate trajectory logic.
